## United States Senate

## WASHINGTON, DC 20510

January 30, 2024

Chairwoman Christy McCormick Vice Chair Benjamin W. Hovland Commissioner Thomas Hicks Commissioner Donald L. Palmer U.S. Election Assistance Commission 633 3rd Street NW, Suite 200 Washington, D.C. 20001

## Dear Commissioners:

We write to express serious concerns about the use of artificial intelligence (AI)-generated content to spread disinformation about our elections and to urge the Election Assistance Commission to take additional steps to help state and local officials combat these threats.

We are already seeing AI being used to target candidates and voters from both parties. Last week there were reports of AI-generated robocalls using the President's voice to tell people not to vote in the primary election in New Hampshire, and AI-generated deepfakes have also impacted multiple Republican presidential candidates by deceptively showing them saying things that they never said.

We have introduced bipartisan legislation to address the challenges that this kind of deceptive AI-generated content poses to our democracy. As this year's primary elections are now underway, it is critical that those who administer our elections have the information necessary to address these emerging threats in a timely and effective way.

It is for these reasons that we urge the Election Assistance Commission to provide comprehensive guidance to state and local election administrators about how they can defend against AI-generated disinformation. We also ask that you take further action to ensure that officials are aware of the support and information that the Commission makes available, following the initial guidance that it released in August as the technology becomes more sophisticated and voters continue to cast ballots in this year's elections.

Thank you for your attention to this important matter. We look forward to your response.

Sincerely,

Amy Klobuchar

United States Senator

Susan M. Collins
